

MASTER-LEE ENGINEERED PRODUCTS INC.

*The Master-Lee Engineered Products Transport Systems
Custom designed systems for moving personnel and equipment.*

— *Configured for your application* —
— *Designed for safety* —

Designed to work in concert with our work platforms or as a stand-alone device, our transport systems are made to safely allow workers and equipment access into and around the reactor cavity area.

All EPI Transport Systems are conceptually designed to meet the specific needs of our customers by experts who use them in the field. Just as we do with our other custom designed equipment, we work with our customers to come up with a system that will meet their needs and integrate with existing equipment or processes.

Our engineers are then given the task of meeting the engineering criteria and safety requirements, all within a cost-efficient budget.

Design Goals:

- Safety of workers and equipment.
- Provide a benefit to the outage schedule.
- Ease of assembly – minimizing crane usage.
- Reliable service and easy maintenance.

The EPI Transport Systems are cost-efficient, time saving tools designed to deliver greater productivity and safety.
